About me

Software developer with over a year of experience, focusing on designing and building efficient, scalable, responsive, and visually appealing web applications. Committed to collaborating in teams to deliver agile, effective solutions. Currently pursuing a degree in Computer Science.

Highlights

Significantly improved application performance and enhanced 3D rendering stability in a real-time SaaS product.

Successfully refactored and modernized legacy UIs, migrating stacks from pure React to Next.js and TypeScript resulting in improved UX and maintainability.

Experience

***Hybrid AI** - Software Engineer - Intern Aug 2024 – Present*

Boosted application performance and stability by implementing HTTP request deduplication to prevent token conflicts and engineering a custom STL model caching system through deep modification of Three.js internals.

Built the frontend of a new project from scratch, defining architecture, component structure, state management, and backend integration — also contributed to backend features and API adjustments using Python FastAPI.

Modernized and refactored a project's outdated, complex UI, while successfully migrating the stack from React to Next.js and TypeScript, leading to better UX and maintainability.

Maintained and improved a legacy system built with Java + JSF and jQuery, resolving critical bugs and delivering new features to enhance stability and usability.

Tech Stack: TypeScript, Python, React, Next.js, Node.js, TanStack Query, Figma, TailwindCSS.

Education

B.S. Computer Science

IBMR - Jul 2022 - Jun 2026

The Matrix - Educational Matrix Operations Platform

Developed a comprehensive web application for learning and practicing matrix operations, featuring interactive calculators for addition, subtraction, multiplication, and scalar multiplication.

Built an integrated quiz/mini-game system to help students test and improve their matrix knowledge through gamified learning.

Integrated OpenAI API to provide real-time, personalized explanations for student answers, enhancing the learning experience with AI-powered feedback

Created educational content and tutorials section to teach matrix fundamentals and properties.

Tech Stack: [Next.js](#), TypeScript, Zod, OpenAI API, TailwindCSS.
